

TechMart Electronics - Installation & Setup Guide

Smartphone Setup

Power on your device, select your language, connect to Wi-Fi, and sign in with your Google or Apple account. Restore from backup if migrating from an old device.

Laptop First Boot

On first boot, complete the Windows or macOS setup wizard, connect to a network, and install pending system updates before installing third-party software.

Smart Home Device Pairing

Download the TechMart Home app or the relevant manufacturer app, put the device in pairing mode by holding the reset button for 5 seconds, and follow in-app instructions.

Common Installation Errors

If a device fails to pair, ensure it is within 2 meters of the router, restart both the device and router, and confirm the Wi-Fi is on the 2.4GHz band for older smart devices.
